Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of claims 1 – 13 in the reply filed on June 28, 2004 is acknowledged. The traversal is on the ground(s) that the search and the examination of the entire application can be made without serious burden to the Examiner or the Patent Office. This is not found persuasive because the method steps have a different classification and are better searched by one knowledgeable in the method art.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1 – 4 and 6 – 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Nagata et al. (USPN 4,592,937).

Nagata et al. disclose an integral plastic and metal part (Column 1, lines 41 – 45) wherein the metal component has a first opening therein (Figure 3, #52). A plastic component is disposed around a portion of the metal component (Figure 1, #4 and 5). The plastic material extends

Art Unit: 1772

through the first opening and includes a flange on one side for securing the components together (Column 1, line 66 to Column 2, line 23). The rectangular and annular flanges (Figures 5 and 8) extend outwardly of said edges on one side of the opening and the plastic material extends beyond said edge on the opposite side of said opening, wherein the opening has curved edges (Figures 5 and 6, #6). The metal component contains a closed section (Figure 1, #5) and second openings disposed opposite the first openings (Figure 3, #52). As seen in Figure 1, the metal component has a second edge that has been folded and contains an opening. The plastic component contains openings (Column 8, #80c).

4. Claims 1 – 13 are rejected under 35 U.S.C. 102(e) as being anticipated by Palmer et al. (USPN 6,708,583).

Palmer et al. disclose an integral plastic and metal part (Column 3, lines 38 – 41 and Column 4, lines 39 – 41) wherein the metal component has a first opening therein (Figures 3 and 4, and Column 5, lines 44 – 68). A plastic component is disposed around a portion of the metal component (Figures 1 and 2, #11 and 20). The plastic material extends through the first opening and includes a flange on one side for securing the components together (Column 6, lines 6 – 12). A plurality ribs make up the plastic component (Column 2, lines 61 – 67). The rectangular and annular flanges (Figures 4 and 6) extend outwardly of said edges on one side of the opening and the plastic material extends beyond said edge on the opposite side of said opening, wherein the opening has curved edges (Column 6, lines 10 – 12). The metal component contains a closed section (Figure 1, #11) and second openings disposed opposite the first openings (Figure 1, #53).

Art Unit: 1772

As seen in Figure 1, the metal component has a second edge that has been folded and contains an opening. The plastic component contains openings (Figure 1, #41).
